Practical - 5

File and Error Handling

1   Develop a PHP form to get students marks of 5 subject and generate result. Take the following inputs: Exam No, Course (Drop Down), Student photo, Semester. The photo should not be greater than 25 kb in size and must be in JPEG format. Check necessary validation and provide the option to upload the photograph.
Display Subject1 Marks, Subject2 Marks, Subject3 Marks, Subject4 Marks, Subject5 Marks, Total Marks, Result(Pass/Fail), Class (First/Second/Pass) in the Result Sheet.
The result should be generated in a tabular form and should include the photograph in the result sheet. Provide the facility to download the result sheet at the user end.

2   Update the above program to add a custom error handling.

3   Update above program to add Exception handling
